

Do you think that the rapid development of new technologies in recent years is a boon or curse for societies around the world? What is your opinion on this and support your point of view with details from your own experiences, observations or reading.

Due to the rapid advancement of technology, there have been many inventions that have benefitted our lives. I believe that this rapid development is a great boon for societies around the world. This is because various inventions are able to boost the economy and also help societies keep connected around the world.

One of the greatest inventions up to date is online shopping. Online shopping has brought about numerous benefits and has also made daily tasks much more efficient. People don't have to put in the physical effort to travel a certain distance to purchase products. They are able to do it at the comfort of their own home and at any time that is convenient. This has helped people save a lot of time and effort.

There are also many other inventions that have helped us keep connected with our loved ones. Video call applications such as Skype allow family and friends to keep in contact with each other even though they are thousands of miles apart. For example, parents are able to see their children through the video application even though their children are studying overseas.

Although some people disagree and claim that the rapid development of new technologies have made us less productive, I believe that it is up to the people

on how they allocate their time. Therefore, I strongly agree that technology has been a great boon to societies around the world.
